April 28 - May 2, 2008

Join the QUEST for Quality Engineered Software!

McCabe Software's Dale Brenneman speaks on Software Reliability and Testing: Know When to Say When

Software reliability must be considered for all software assets. Some or all parts of a component or application may have greater reliability risk due to factors such as business, safety, mission criticality, high complexity, recent change, or a history of high defect rates. Automated tools can assist in analyzing such factors, including that of high complexity. Once the level of risk associated with various parts of a component or application is identified, determinations must be made as to what degree of testing should be applied. That is, the test manager must Know When to Say When - what testing to perform and when to stop. Test completion criteria for software requiring high reliability should include not only the completion of functional and requirements based tests, but also defect rates and code coverage. Automated tools can assist with this analysis at various levels. Join Dale as he discusses how to define the criteria that will help to determine just how much testing is enough.

QUEST Chicago Keynotes

Sam Guckenheimer
Microsoft

Cem Kaner
Florida Institute of Technology

Guenter Limboeck
SAP Germany

Joe Jarzombek
Department of Homeland Security

Create Your Own Unique QUEST Experience – www.qaiquest.org/chicago

Exclusive Manager's Workshop

Begin your QUEST experience in a highly interactive and intimate setting, where you can work together with the QAI professional staff and your peers to develop strategies and solutions to common challenges facing quality and test managers.

Full Day Tutorials

If you are looking to build new skills or gain in-depth knowledge, then include full-day tutorials in your QUEST experience. Choose from ten tutorials covering project management, requirements, measurement, testing, and quality management topics.

3-Day Conference and EXPO

Create your own custom 3 day learning experience. Learn from 4 keynote presentations, 16 industry expert sessions, 15 solutions benchmarking sessions with corporate practitioners, and 7 product solutions sessions from leading tool firms. Apply your learning in 8 solutions or action planning workshops. Sign-up for individual coaching, meet 12 authors, visit 20 exhibitor booths, and attend 3 networking events.

2-Day Certification Preparation

If you are seeking professional certification in 2008 as a Certified Software Tester (CSTE) or Certified Software Quality Analyst (CSQA), the 2 day prep courses for CSTE and CSQA can be part of your QUEST experience. Offered for the first time -- you can elect to take a full practice test for either the CSTE or CSQA to assess your readiness to sit for the exam.

Special Thanks to McCabe Software as a Gold QUEST Sponsor

Visit the Exhibitors EXPO

Browse Exhibitor Hall! Be sure to stop by the McCabe Software's booth and talk with representatives. Visit all booths and become for the grand prize drawing!

QUEST Topics

- Quality and Test Management
- Test Planning
- Measurement
- Quality Control
- Requirements
- Test Automation
- Performance Testing
- Test Process and Techniques
- Special Topics
- Agile
- Globalization
- People/Team Effectiveness
- Security / Data Privacy
